## PBI 05 - Process Multiple CSV files Into One Election

As an election official, I want the voting system to be able to take in multiple files rather than only one. This is so that we can bring in different files from different balloting locations.

Acceptance Criteria (conditions that have to be fulfilled to ensure the story is complete):

- Voting System can handle multiple CSV files to compute election
- Computes correct election results

Definition of Done (what is required by the team before sending out for review):

- Multiple CSV files are read into voting system
- System testing passes with multiple CSV files
- Code is refactored
- Code is peer reviewed
- Documentation completed
- Consistent coding style throughout code
- Meets all acceptance criteria conditions

Effort: Large

PBI Author(s): Ryan Mower, Hoai Bui, Emma Spindler

#### PBI 07.0 - Invalidate IRV Ballots

As an Election Official, I want the IRV ballots to have at least half of the candidates ranked on each ballot to be considered valid, so that invalidated ballots aren't used in the election.

Acceptance Criteria (conditions that have to be fulfilled to ensure the story is complete):

- Candidates must be ranked so that they are rounded up from .5 or above to the next higher integer value, so that the ballot is valid.
- The ballots will not be invalidated at the point of collection but will need to be done when the election is run.

Definition of Done (what is required by the team before sending out for review):

- Ballots are deemed valid or invalid
- Only valid Ballots used in election
- Passes unit tests
- Code is refactored
- Code is peer reviewed
- Documentation completed
- · Consistent coding style throughout code
- Meets all acceptance criteria conditions

Effort: Large

PBI Author(s): Ryan Mower, Hoai Bui, Emma Spindler

#### PBI 03 - Load PO Ballots

As an Election Official, I want the PO election ballots to be brought in a file so that the ballots can be counted and elections can be run.

Acceptance Criteria (conditions that have to be fulfilled to ensure the story is complete):

- Must be a .csv file
- PO must be formatted as:
  - o 1st Line: PO for Popularity Only
  - o 2nd Line: Number of Candidates
  - 3rd Line: The candidates and their party in []. The name and party are separated by commas.
  - 4th Line: Number of Ballots

Definition of Done (what is required by the team before sending out for review):

- Reads in ballots from CSV correctly into memory
- Data is able to be worked on once in memory
- Passes unit tests
- Code is refactored
- Code is peer reviewed
- Documentation completed
- Consistent coding style throughout code
- Meets all acceptance criteria conditions

Effort: Medium
